

Data File Layout

Formulary – Product

Background

The Vendor Drug Program provides a weekly update of resource data available for download from txvendordrug.com/resources/downloads. This file is of variable field length, meaning the field length varies depending on the data. Column headers are included as the first line, and each subsequent line is a row of data whose items have been separated by a vertical bar, or pipe (|). Values are enclosed between double quotes when values are present, but double quotes are not applied to fields when no character value exists. Null values are not populated with spaces
